

*Driven by data.
Navigated by humans.*

Our mission is to harness project data to help people make the best decisions.

About Mudano

Mudano is developing the autonomous project.

We capture data on projects – such as daily tasks, meeting notes, team sentiment, resource information and project progress – and use it to guide better decision-making. Using machine learning we can predict the path of a project, helping teams to foresee issues, improve productivity and deliver efficiently.

We call this Delivery Science™

*Be part of
changing
the industry*

Our teams are focused on delivering projects in a data-driven, value-led manner.

We are building a unique software package which integrates project management tooling with data science and analytics to support teams working on large change programmes to make better project decisions and predict upcoming issues through data insight, visualisation, predictive analytics and real time reporting.

We are starting from the ground up to build a system for all project stakeholders and ensuring that at every interaction value is added, insight is communicated and efficiency is gained. There's no use gathering

information about projects if the capture of data becomes an overhead in itself.

Data is core to our business too. By analysing data from projects, our platform will highlight future issues, predict the probability of slippage and provide real sentiment analysis on project delivery.

The system is a cloud based collaboration tool, built using cutting edge open source technologies.

*Different
works here*

What Will You Be Doing?

As a Data Assurance Manager, you will be leading and conducting data audits providing data analytics support to team members and drive the development of clients audit's continuous programme.

You will also be involved in the operational data governance function, helping to define models including clear lines of operational data accountability across the various business stakeholder groups.

You will be leading effective, cross-functional change management processes, ensuring compliance with governance and data management policies whilst representing the data operations team.

Desired Skills and Experience

- / Minimum 4 years data auditing experience within a big 4 or large SI background
- / Financial Services or investments industry experience
- / Lead process audit and review on complex banking processes
- / Understand what good controls should be in place
- / Review and challenge deliverables from team to ensure quality
- / Project manage a work stream working with Programme managers and directors

*Love what
you do*

Benefits and compensation

- / Salary 55k - 65k depending on skills, experience and qualifications
- / Flexible holiday plan of 25 days annual leave (plus bank holidays)
- / Comprehensive benefit package including private medical, wellbeing cover, discounted gym membership, and life insurance
- / Pension scheme with 3% employer contribution
- / Entry into our company stock option scheme
- / Individual training budget and career mentoring
- / 1% club – small benefits that make a big difference (i.e. monthly audible/book allowance, UBER for business)
- / Edgy head-office in start-up incubator (including Thursday beer hours, networking, TED style talks, and unlimited tea/coffee and fruit)
- / Choice of Mac, Windows, or Linux dual-boot and tablet
- / Flexible working
