

DATA VIZ AND INFORMATION DESIGNER

LONDON (WITH TRAVEL)

MUDANO

WASTE LESS. DO MORE.

Driven by data. Navigated by humans.

Our mission is to harness project data to help people make the best decisions.

About Mudano

Mudano is developing the autonomous project.

We capture data on projects – such as daily tasks, meeting notes, team sentiment, resource information and project progress – and use it to guide better decision-making. Using machine learning we can predict the path of a project, helping teams to foresee issues, improve productivity and deliver efficiently.

We call this Delivery Science™

Be part of changing the industry

Our client-facing teams are focused on delivering projects in a data-driven, value-led manner.

What Are We Building?

We are building a unique software package which integrates project management tooling with data science and analytics to support teams working on large change programmes to make better project decisions and predict upcoming issues through data insight, visualisation, predictive analytics and real time reporting.

We are starting from the ground up to build a system for all project stakeholders and ensuring that at every interaction value

is added, insight is communicated and efficiency is gained. There's no use gathering information about projects if the capture of data becomes an overhead in itself.

Data is core to our business too. By analysing data from projects, our platform will highlight future issues, predict the probability of slippage and provide real sentiment analysis on project delivery.

The system is a cloud based collaboration tool, built using cutting edge open source technologies.

Different works here

If you've spent your career building toolkits to make things more efficient, you'll find kindred spirits at Mudano.

What are we looking for?

We are looking for a Designer who is interested in focussing and developing their career into data visualisation and information design.

The ideal candidate will have at least 3 years of graphic design experience, and the ability to display complex information attractively, and most importantly, effectively.

The Designer will receive the support of one-to-one, on-the-job training, and access to detailed data vis workshops. This role is an integral part of our client facing teams, helping the client make sense of their data and turn it into useful business insights.

The team will rely upon the designer as a creative thinker, who can reveal stories through data across interactive, dynamic dashboards and bespoke visualisations.

- Expert-level proficiency with the Adobe Creative Suite is a must.
- The candidate should feel comfortable working directly with clients as an active participant in meetings and one to one conversations, demonstrating excellent communication skills.
- Experience and interest in illustration and animation are a plus.

We believe in win-win

You'll have opportunities to challenge yourself and rapidly grow your career.

Benefits and compensation
