

## *Driven by data. Navigated by humans.*

Our mission is to harness project data to help people make the best decisions.

### **About Mudano**

Mudano is developing the autonomous project.

We capture data on projects – such as daily tasks, meeting notes, team sentiment, resource information and project progress – and use it to guide better decision-making. Using machine learning we can predict the path of a project, helping teams to foresee issues, improve productivity and deliver efficiently.

### **We call this Delivery Science™**

## *Be part of changing the industry*

Our client-facing teams are focused on delivering projects in a data-driven, value-led manner.

### **What Are We Building?**

We are building a unique software package which integrates project management tooling with data science and analytics to support teams working on large change programmes to make better project decisions and predict upcoming issues through data insight, visualisation, predictive analytics and real time reporting.

We are starting from the ground up to build a system for all project stakeholders and ensuring that at every interaction value

is added, insight is communicated and efficiency is gained. There's no use gathering information about projects if the capture of data becomes an overhead in itself.

Data is core to our business too. By analysing data from projects, our platform will highlight future issues, predict the probability of slippage and provide real sentiment analysis on project delivery.

The system is a cloud based collaboration tool, built using cutting edge open source technologies.

## *Different works here*

If you've spent your career building toolkits to make things more efficient, you'll find kindred spirits at Mudano.

### **What are we looking for?**

We are looking for Customer Facing QlikView Consultants with at least 3 years of relevant experience to work with our client teams to drive-out analytical requirements through prototyping and visualization.

### **The ideal candidate must have a passion for beautiful visualisation and data storytelling, and will have experience in the following:**

- Developing reporting and data visualisations for clients in the form of advanced dashboards and workbooks
- Understanding infrastructure requirements and best practices to support a QlikView deployment
- Developing and documenting technical architecture, system design and other technical aspects

- Be able to provide examples of producing impactful visualisations
- Ability to communicate at both technical and business levels

### **Key skills to perform the role are as follows:**

- 3+ years of experience creating static and interactive visualizations, reports, and workbooks in QlikView
- 1 Years experience working with QlikView versions 11 and 12 (analytical development and administrative)
- Ability to write SQL in order to pull, join, and aggregate data in order to create views
- Ability to work closely with users to understand the business purpose the report serves and identify/fix bugs
- Self-starter and self-directed with some level of inquisitiveness to query and test results

## *We believe in win-win*

You'll have opportunities to challenge yourself and rapidly grow your career.

### **Benefits and compensation**

- / Salary between £40K and 60K (depending on experience)
- / Flexible holiday plan consisting of 25 days annual leave (plus 8 bank holidays)
- / Comprehensive benefit package including private medical, wellbeing cover, discounted gym membership, and life insurance
- / Pension scheme with 3% employer contribution
- / Entry into our company stock option scheme
- / Individual training budget and career mentoring
- / 1% club – small benefits requested by the team that make a big difference (e.g. monthly book allowance, UBER for business)
- / Edgy head-office in start-up incubator (including Thursday beer hours, networking, TED style talks, and unlimited tea/coffee and fruit)
- / Choice of Mac, Windows, or Linux dual-boot and tablet
- / Flexible working
