

Mudano is developing the autonomous project.

Our mission is to harness project data to help people make the best decisions.

We capture data on projects – such as daily tasks, meeting notes, team sentiment, resource information and project progress – and use it to guide better decision-making. Using machine learning we can predict the path of a project, helping teams to foresee issues, improve productivity and deliver efficiently.

We call this Delivery Science™.

We work with our clients to transform how they conduct change, ensuring projects deliver value to the business rather than a sole focus on technical scope. We run workshops with stakeholders to establish the value of a project at the outset, setting Business Value Goals which we can measure.

We are running some of the most complex change programmes and portfolios in the industry with budgets exceeding £100m. Our world-class consulting teams lead large-scale data, system integration and business transformation projects for financial services clients – our current sector focus. Within the next two years we plan to expand into telecoms and utilities.

Each of our teams is playing an important role in reaching our vision of developing the autonomous project. Our delivery teams work with our clients to instil a focus on value from project delivery. They embed a culture of data-driven decision making and, in turn, the data they generate day-to-day on projects is captured by Sharktower, our delivery science platform. Our product team is building Sharktower, curating project data to drive behaviour

change on projects. Our data scientists are developing Sharktower's artificial intelligence capability, which in turn supports more efficient client delivery.

Mudano was founded in November 2014 by an executive team with a background at the world's top delivery consultancies who knew there was a better way to deliver change. We have grown rapidly since – roughly doubling in team size and revenue each year – a trend we expect to continue. We are now an 80-strong team of delivery managers, data scientists, engineers and designers who are all focused on removing muda* from processes, projects and organisations.

Everyone at Mudano unites around the belief that the consulting industry needs to be fundamentally redesigned around value delivery. We are revolutionising how large transformation programmes are managed and need world-class talent to help us make our vision a reality. To take up this challenge you need grit, ingenuity and a desire to disrupt the status quo.

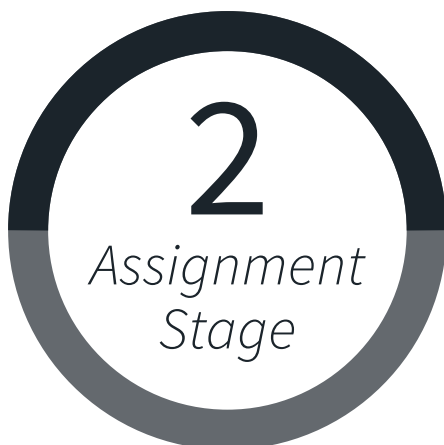

**muda – from Japanese meaning waste. Mudano. No waste.*

What to expect

You'll have a call with someone from Mudano's product or data science team who'll want to learn more about your technical skills, experience, background and what you've achieved in your career.

You've been working in the industry already, so we're sure you'll be full of ideas of how to do things better, and ideally bring some examples of the impact you've already had. This will also be your opportunity to understand our proposition better, and we're sure you'll have lots of questions for us.

For the assignment, we want to understand if you are a good fit for Mudano, and if we are a good fit for you - we would like to work together on a test assignment.

You should work with us in the style you normal would if you already worked here. The assignment is as much about testing our ability to work together as it is testing your ability to produce great work. Please take the opportunity to schedule time with us to work in your normal style.

Once completed, we will then invite you to meet a member of the team to discuss your assignment.

Mudano is on a journey to change the industry, and we want to make sure that aligns to your career. The final stage is as much for you as it is for us.

One of the great things about the size we are now, is that careers and roles can be specifically tailored to the individual. Think about what would make the best job in the world for you, and talk to us about that - there's a good chance it coincides with exactly what we're looking for.

We have two goals at Mudano: to fundamentally change the industry, and to become the best place to work in the world. We hope you can be a part of our success.
